#### **DETAILED ACTION**

#### Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 5/31/07 has been entered.

### Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-20 are rejected under 35 U.S.C. 102(e) as being anticipated by Eggers et al (US Patent No. 5697882) or (US Patent No. 5871469) or (US Patent No. 5683366). The Eggers reference discloses an electrosurgical probe and method for treating a target tissue at a surgical site in figure 20 comprising a shaft and an electrode Application/Control Number: 10/799,908

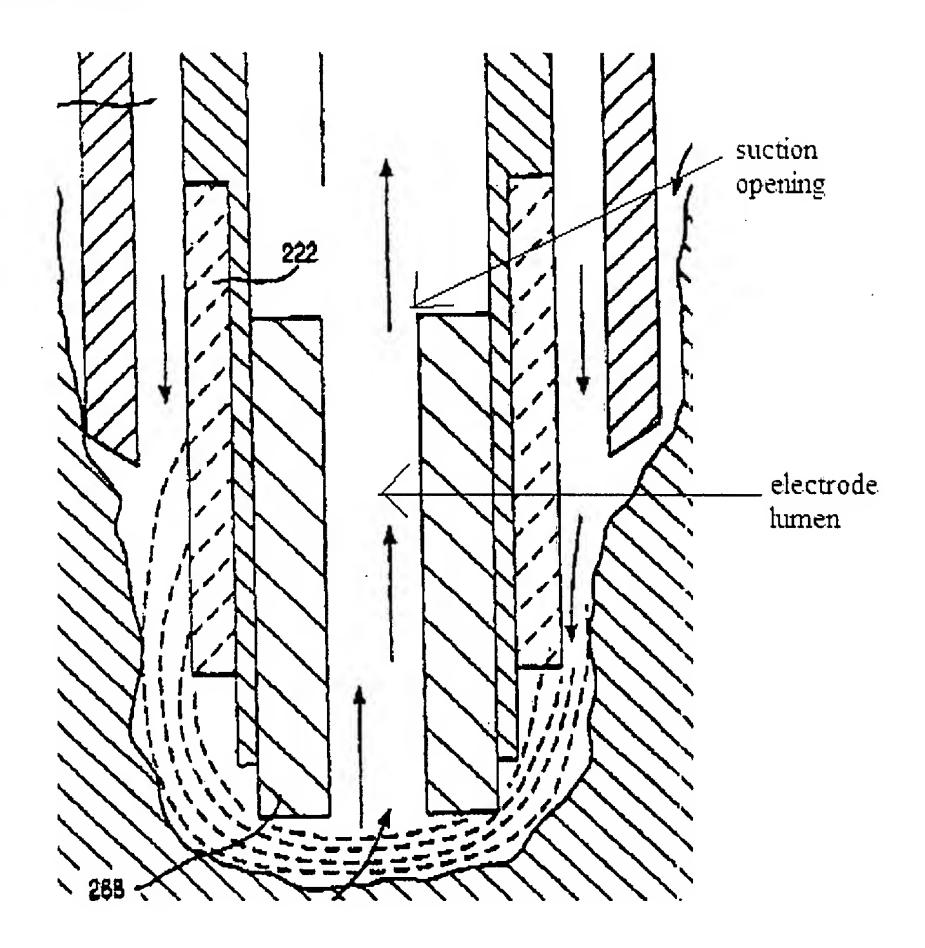

Art Unit: 3767

assembly disposed on the shaft, wherein the electrode assembly includes an electrically insulating electrode support and at least one active electrode terminal arranged on the electrode support, each of the at least one active electrode terminal having an electrode lumen therethrough, wherein the electrode lumen is adapted for removing unwanted materials from the surgical site; and the at least one active electrode terminal comprises an end having an open electrode port in communication with the electrode lumen; and the at least one active electrode terminal comprises a body having a suction opening formed therein, the suction opening in communication with the electrode lumen, see attached figure below which comes from figure 20 and see col. 8 lines 8-53, col. 11 line 39 – col. 12 line 52, and col. 24 lines 8-31.

Page 3

Application/Control Number: 10/799,908

**Art Unit: 3767** 

With respect to claims 2-14 & 17-19, for all 3 references see figure 20.

With respect to claims 15-16, see col. 11 line 39 – col. 12 line 52.

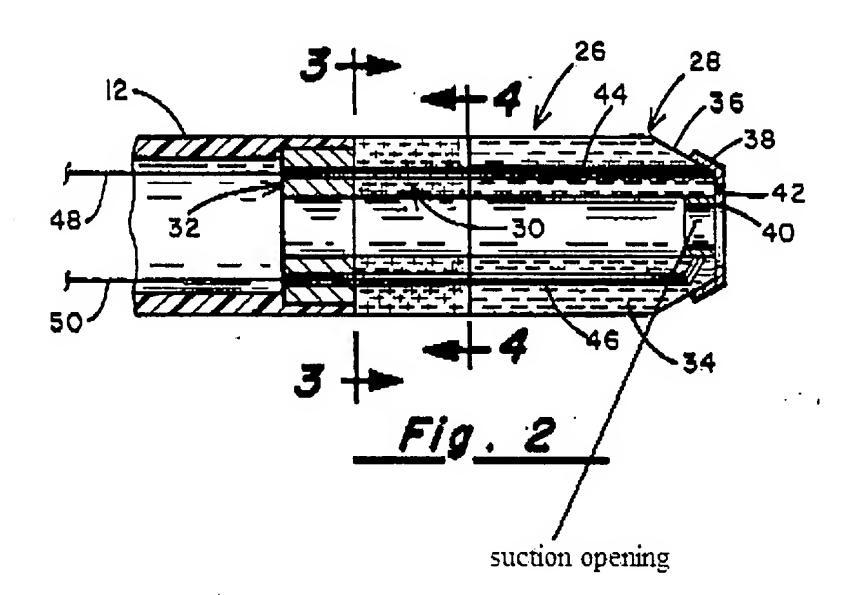

With respect to claim 20, see col. 3 line 47 – col. 4 line 47.

The applied reference has a common assignee with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Art Unit: 3767

Claims 1, 3-11, 17-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Stasz (US Patent No. 4936281). The Stasz reference discloses an electrosurgical probe and method for treating a target tissue at a surgical site in figure 2 comprising a shaft and an electrode assembly disposed on the shaft wherein the electrode assembly includes an electrically insulating electrode support 34 and at least one active electrode terminal 38 having a lumen therethrough and wherein the electrode lumen is adapted for removing unwanted materials from the surgical site, and the at least one active electrode terminal comprises an end having an open electrode port in communication with the electrode lumen; and the at least one active electrode terminal comprises a body having a suction opening formed therein, the suction opening in communication with the electrode lumen; also see col. 3 line 17 – col. 4 line 15, and col. 6 lines 31-45.

#### Response to Arguments

Page 6

Applicant argues that Eggers does not disclose forming an additional opening in the body of the electrode as recited, the examiner disagrees. The claim only requires an opening and whereas as denoted in the rejections above there is an opening for the suction opening and a lumen for the electrode. The term opening is not defined in the specification and therefore the broadest reasonable definition can be utilized in determining what a suction opening can be.

Applicant argues that Stasz does not teach an additional opening, the examiner disagrees. In view of the arguments made above and due to the drawings added to the rejection, the examiner would like to note that there is an suction opening and an electrode lumen.

#### Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Cohen (US Patent No. 4832048) discloses an electrosurgical probe with a shaft, electrode assembly, an open electrode port, and a body having a suction opening.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Benjamin Huh whose telephone number is 571-272-8208. The examiner can normally be reached on M-F: 9:00 AM - 4:00 PM.

Art Unit: 3767

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Kevin Sirmons can be reached on 571-272-4965. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
